

## Sensify AI for Refrigeration

Sensify is a software for commercial, technical, and environmental management of commercial refrigeration, powered by AI. It specializes in ensuring that cooling equipment is in the right place, at the desired temperature, energy-efficient, and generating sales.

### How Sensify Solves the Industry's Key Challenges

#### Energy Consumption

We measure and optimize energy usage for each unit, reducing operational costs and environmental impact. Additionally, we detect electrical risks that could harm the equipment's performance and safety.

Carbon Program

**Zero** 

#### Cold Chain

We monitor and alert on any potential disruptions in the cold chain, ensuring that products reach the final consumer in optimal conditions, reducing food and medication loss.

#### Traceability

We ensure that refrigerators reach the point of sale quickly, tracking all movements and enabling immediate actions in case of unauthorized movements. Protect your assets and sales.

#### Proactive Maintenance

Real-time monitoring allows detecting and solving issues before they impact operations. 45% of failures are resolved remotely, extending equipment lifespan and reducing downtime.

#### Commercial Insights

We provide key data on refrigerator sales, helping to optimize restocking, understand return on investment, and make more informed business decisions.
